Open Source Projects

</> Bevy Kajiya
Adds ray-traced rendering to the Bevy Engine — Repository

- Enables any novice gamedev to experiment with raytracing
- High Performance– 60+ render frames per second, 60+ engine ticks per second
- User interface abstracts away low-level raytacing pipeline management from the user for ease of use
- Endorsed by 50+ Rust community members (Github stars)

</> NBody-WASM-Sim — Demo
GPU-rendered astrophysics simulation in the web browser — Repository

- Performant real-time physics in Rust using linear algebra libs and WebGPU– 3.5x faster than Javascript
- Builds and deploys the demo web page automatically using GitHub CI/CD Actions
- Serves as an open-source template to create GPU-accelerated, interactive web apps
- Endorsed by 70+ Rust community members (Github stars)

</> Contributions to KubOS — Contribution
Simulation support for Rust flight software — Repository

- Enables Rust-based flight software (KubOS) to run on NASA's software-simulated CubeSat hardware
- Contains Rust bindings for NASA CubeSat emulation HALs

Career

Software Engineer — Feb 2022 – Present
NASA - COMET, Command & Control — *Kennedy Space Center, FL, USA*

- Software engineering of simulation software for NASA's Exploration Ground Systems (EGS) using agile software practices
- Primary contributor to NASA Class C verified software
- Developed CI/CD tools on GitLab to accelerate the development process
- Lead team effort on design of Rockwell PLC programming language features in NASA's EGS PLC emulator
- Collaborated with teammates on technical documents using Windchill software
- Completed a 10 week, NASA-sponsored course on leadership and management

Software Engineer — Jun 2020 – Feb 2022
AFIT, Center for Space Research & Assurance — *Wright-Patterson AFB, OH, USA*

- Lead the effort of onboarding summer interns, creating learning materials on the C language and flight software
- Developed CubeSat flight software in C with NASA's cFS framework and also in Rust with KubOS
- Primary developer of GitHub contributions to an open-source spacecraft flight software framework written in Rust (KubOS)
- Lead the team effort on the design of system mode management software on a CubeSat spacecraft
- Developed CubeSat ground control software which interfaces with databases and TCP/UDP mission communications in Python

- Developed software in Python to automate processes and accelerate CubeSat mission development

Software Engineering Co-op Jan 2019 – Aug 2019
NASA IV&V *Fairmont, WV, USA*

- Contributed to NASA's open-source flight software simulator (NOS3) with upgraded packages and documentation
- Developed Rust bindings to C++ based hardware abstractions layers for NOS3 simulator
- Modeled CubeSat OEM hardware components into C++ emulators running in NOS3

Skills

- **Primary Languages:** Rust, C/C++, Python
- **Other Languages:** Java, TypeScript, GraphQL, IEC 61131-3 Structured Text, Ladder Logic
- **Platforms:** Ubuntu, RedHat 8, Windows
- **CI/CD:** GitLab CI configurations (YAML)
- **Content Management:** Git, GitHub, GitLab
- **Software:** Docker, Linux Bash, Confluence/Jira, VersionOne, Visual Studio, VSCode

Education

Bachelor of Science, Computer Science & Engineering Class of 2021
University of Toledo, ABET Accredited *Toledo, OH, USA*

- Summa Cum Laude
- 3.97 GPA
